

Healthcare & Life Sciences

World's first 5G-enabled remote robotic surgery:

Performed at 4,500 m altitude by surgeons **4,000 km away**.

Patients can use **z smart wearables that monitor their health** at all times and allow immediate feedback.

5G enables high-quality video consultations and online patient monitoring: patients in remote areas can access specialized medical care.

Drug research and development is assisted by machine learning and AI.
