

Rigorous empirical  
research on  
intellectual property

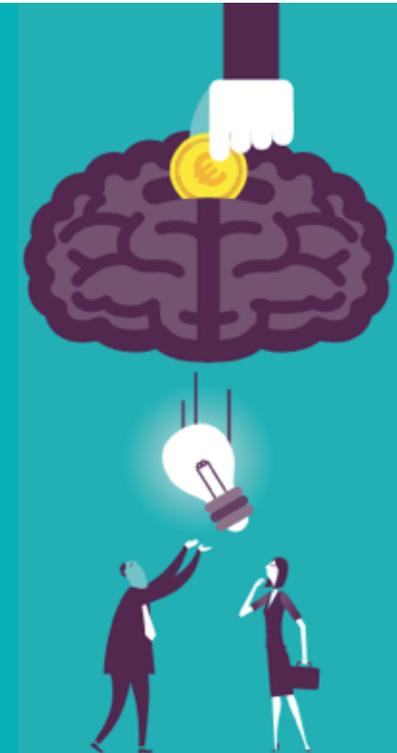

## The Value of Standard Essential Patents and the Level of Licensing

**Host:** Axel Ferrazzini, Managing Director, 4iP Council

### Presenters:

- **Bowman Heiden**, Co-Director, Center for Intellectual Property (CIP), Chalmers/UGOT/NTNU; Visiting Professor, UC-Berkeley
- **Jorge Padilla**, Senior Managing Director, Compass Lexecon
- **Ruud Peters**, CEO, Peters IP Consultancy B.V. ; Former Chief IP Officer and Executive Vice President at Koninklijke Philips N.V.

**4iP Council** Rigorous empirical research on intellectual property

**The Value of Connectivity in the Automotive Sector**

**Prof. Bowman Heiden**  
Co-Director, Center for Intellectual Property (CIP), Chalmers University of Technology; The Hoover Institution, Stanford University

**National Courts Guidance**

**Negotiating Licenses for Essential Patents in Europe**

Increased clarity provided on the principles established by the Court of Justice of the European Union in Huawei v ZTE.

The Court of Justice of the European Union clarified, in Huawei v ZTE (Case No. C-170/13), European law relating to the availability of injunctive relief for infringements of FRAND-based standard essential patents. In doing so, the Court provided a legal framework focused on the good faith

Which types of intellectual property do you need?

Filter table columns

	PATENTS	COPYRIGHTS	DESIGNS	TRADEMARKS	TRADE SECRETS
What do they protect?	All inventions, new and improved ways of doing something, or solving a technical problem.	A work in original intellectual creation.	A new and original design.	Any sign that can be used to distinguish goods or services.	Any type of confidential information that is secret and has commercial value.
Examples of what is protected	Inventive products and processes in all areas of business. For examples of successful inventions see <a href="#">here</a> .	Audio-visual works, software, graphics, architecture, databases, software, design, literature, novels, poems, plays, music and video, graphic works.	Product designs, industrial designs, graphic user interfaces, logos, signs, emblems, and other designs.	Business names, logos, slogans, and other distinctive signs.	Trade secrets, such as formulas, recipes, and other confidential information.
How are my rights protected?	Priority examination making using or selling of the patented invention.	Protects the work being created. Intellectual property is automatically protected, distributed or made available online.	Protects the integrity and attribution of the work.	Registered rights. Public performance and display of the sign.	Not automatically protected. Must be kept confidential.
How long is my invention protected?	Up to 20 years.	Lifetime of the author plus 70 years after their death (depending on the country).	10 years from the date of first commercial use.	Indefinite.	Indefinite.
Do I have to register it?	Yes, filing an application to a patent office is required. There are patent applications in: <a href="#">UK</a> , <a href="#">EU</a> , <a href="#">USA</a> , <a href="#">Australia</a> , <a href="#">Japan</a> , <a href="#">Canada</a> , <a href="#">China</a> , # The Value of Standard Essential Patents and the Level of Licensing

**Dr. Bowman Heiden**

Co-Director, CIP – Center for Intellectual Property UGOT | Chalmers | NTNU. Visiting Professor, School of Engineering, UC-Berkeley. Visiting Scholar, Hoover Institution, Stanford University

**Dr. Jorge Padilla**

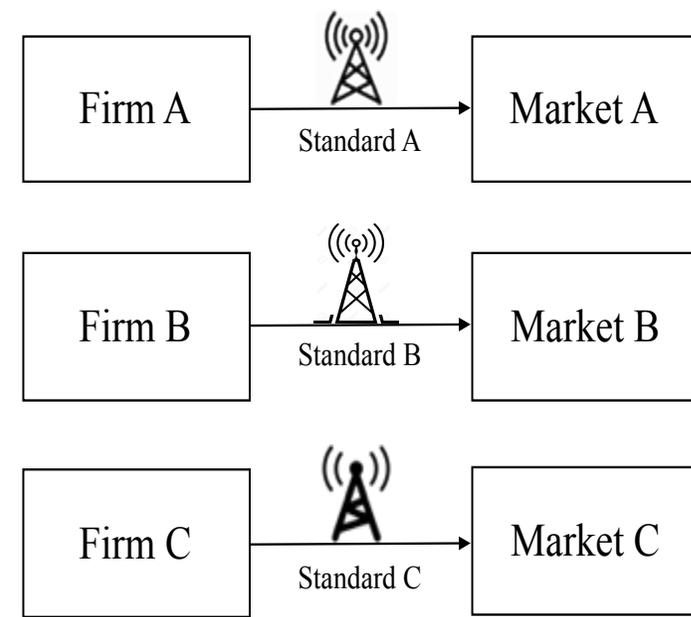

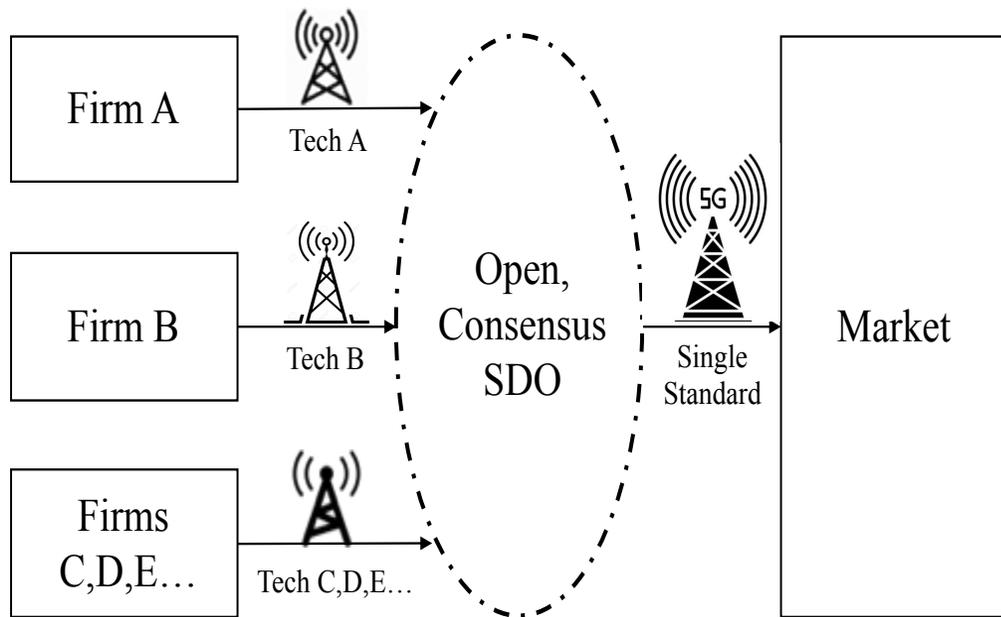

Senior Managing Director and Head at Compass Lexecon.

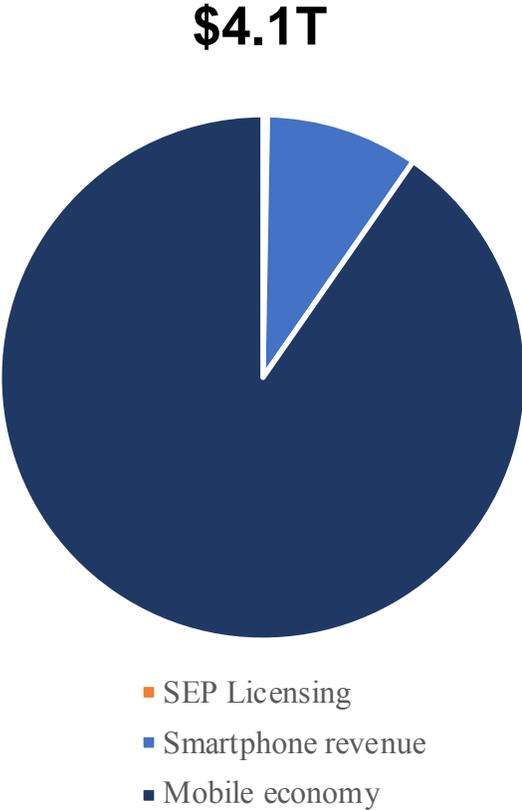

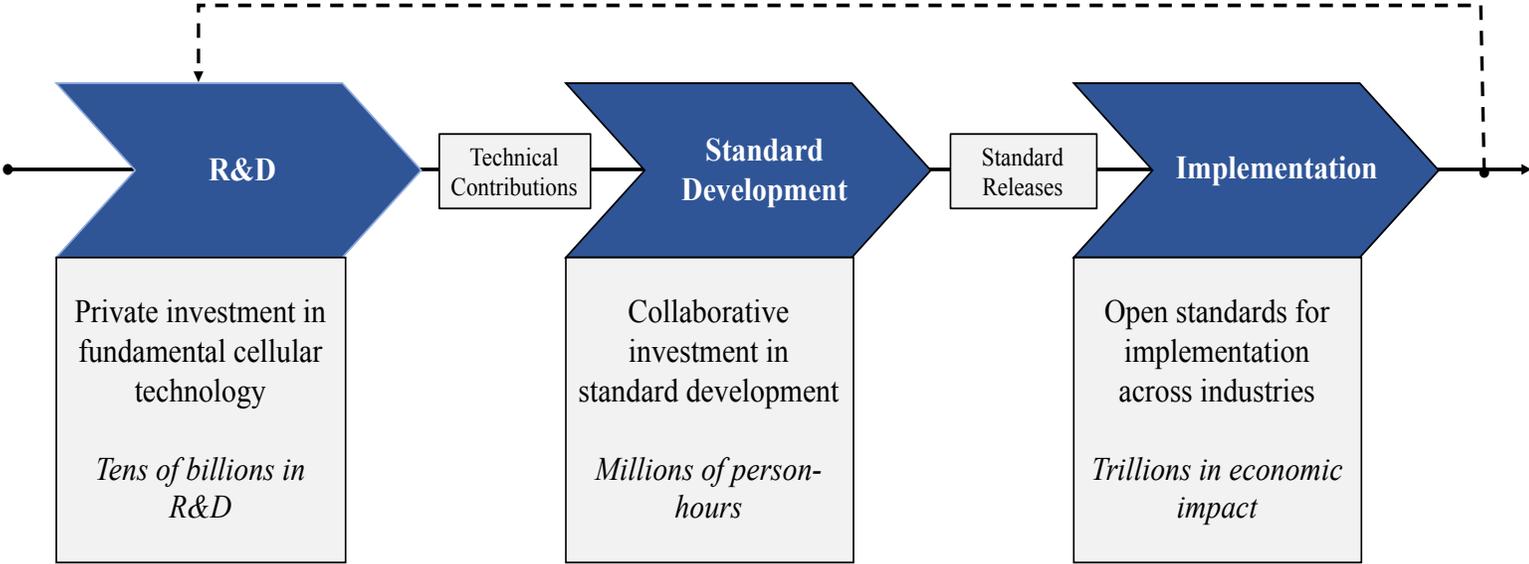

**Ruud Peters**

CEO at Peters IP Consultancy B.V. and former Chief IP Officer and Executive Vice President at Koninklijke Philips N.V.

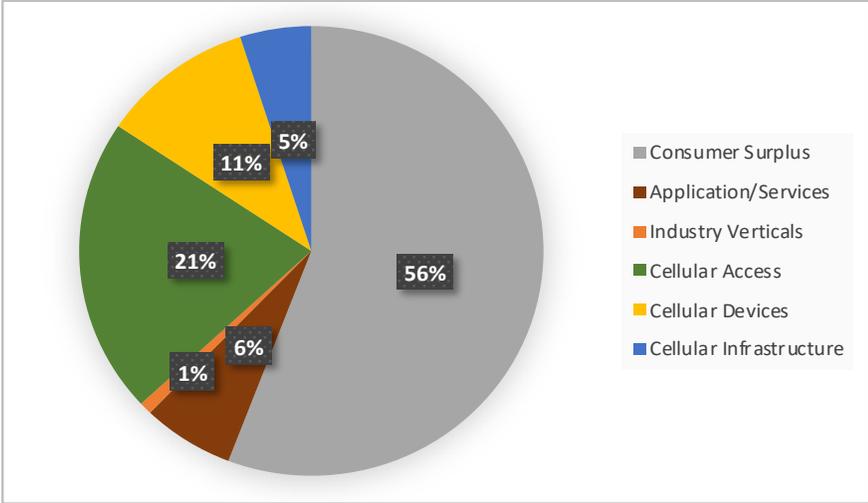

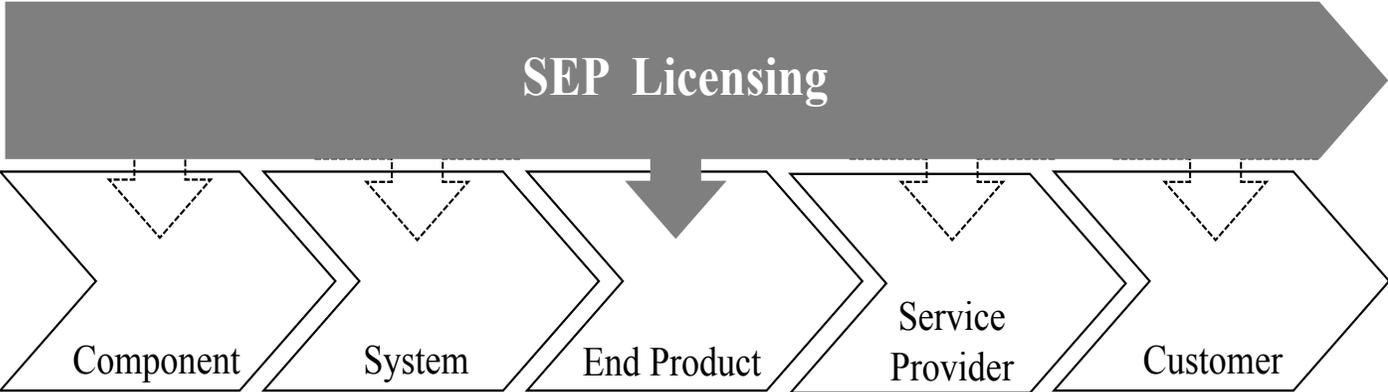

# Open, consensus vs. proprietary standards

# Cellular standards have been very successful

# Cellular Value Chains

# SEP Valuation

## Appropriation challenges

- Owners of enabling technologies often lack the complementary assets to capture/control downstream spillovers.
- The value of enabling technologies may be unknown when they are first introduced in the market, especially in all different use-cases.
- Enabling technologies are intermediate inputs in the value chain, while the value they create is best determined further downstream in the consumer final product/service markets.
- Owners of enabling technologies often lack the resources and concomitant bargaining power to be a credible threat to vertically integrate and compete in the downstream market.

## Appropriation solutions

- FRAND Licensing
- End-user/Consumer-level value determination
- SEP value based on use-case

# The Issue

- SDOs typically require that SEP licensing is conducted under **Fair, Reasonable, and Non-Discriminatory (FRAND)** terms.
- The necessarily open and incomplete nature of the FRAND commitment creates opportunities for actors to try to influence courts and policymakers to define the meaning of FRAND in their self-interest.
- Two of the main contentious issues involved in the practical implementation of the FRAND commitment are (1) **SEP value** and (2) the **level of SEP licensing** in the value chain.
- While they are often depicted as separate issues, they are, in fact, used in combination together with other factors to influence the SEP royalty (and other terms and conditions), which is a function of SEP value.
- Price is ultimately the most important factor (i.e., if the price is right, then little else matters), where **the discussion over the level of licensing is typically a negotiation over price.**

# Three Principles

- **Principle #1.** The determination of SEP/FRAND royalty payments should be independent of the choice of licensing level but dependent on its value in end-use.
- **Principle #2.** The choice of licensing level should consider the minimization of transaction costs in relation to other key technical, legal, and market norms. The adoption of this principle is likely to lead to the choice of a single licensing level.
- **Principle #3.** Firms in the value chain located upstream or downstream of the licensing level should be able to sell or buy from licensed firms without risk. This objective may be achieved by different statutory and contractual means: "exhaustion rights," "non-assertions," "covenants not to sue," "covenants to sue last," or "have made rights." Which alternative is preferable will depend on the relevant legal and economic framework.

# A Few Clarifications

- The optimal level of licensing is unrelated with the choice of royalty base.
- Once value is established, concerns about hold up and holdout no longer play a role in the determination of the optimal level of licensing.
- In that scenario, the choice of level of licensing can be safely delegated to licensors.
- In some industries, established licensing practices may have to be taken into consideration when setting the level of licensing.

# Conclusion

The determination of SEP value should be independent of the level of licensing in the value chain.

# The Level of Licensing in Practice

- Traditionally most SEP licensing has been done at end-product level for consumer products, like TVs, STBs, DVD Players) for:
  - i. System related standards (e.g. DVB, DAB, DVD), and
  - ii. Specific technology standards (MPEG 1, 2, 4 standards).
- Most standards were predominantly made by end-product makers with little to no involvement of component makers.
- Most SEP holders for these standards were end-product makers, including vertically integrated companies also having component businesses.
- Component makers were not targeted for SEP licensing.

# The Level of Licensing in Practice

- Component makers could sell their products to both licensed and unlicensed end-product makers.
- In other cases, arrangements were made between SEP licensors and component makers that they would only sell to licensed product makers.
- In both situations component makers sold their products without explicit or implied license to SEPs.
- Component makers did not provide any patent indemnity for SEPs.

# “Have made” rights

- Licensors may grant licenses to make, use and sell end-products, including have made rights for components for use in licensed end-products.
- Have made rights may be limited to components based on licensee’s own design and solely for supply to licensee.
- If license to licensee is terminated, the have made right to the component supplier terminates also.
- Some argue that have made rights do not allow the have made manufacturer to purchase components its needs from suppliers higher up in the value chain.
- In the US have made rights are interpreted broadly as allowing licensee to do all what is needed to make license products.

# Non-asserts / Covenants-not- to-sue

- Formalized unregulated situation: non-asserts for upstream component makers.
- Some US-courts have considered have made rights equivalent to a license grant leading to exhaustion of patents.
- With non-assert for component makers a licensor can no longer put pressure on an unwilling licensee through its suppliers.
- Alternative is covenant-to-sue-last: sue supplier only if all other remedies are exhausted.

# Case Study: One-Blue Patent Pool

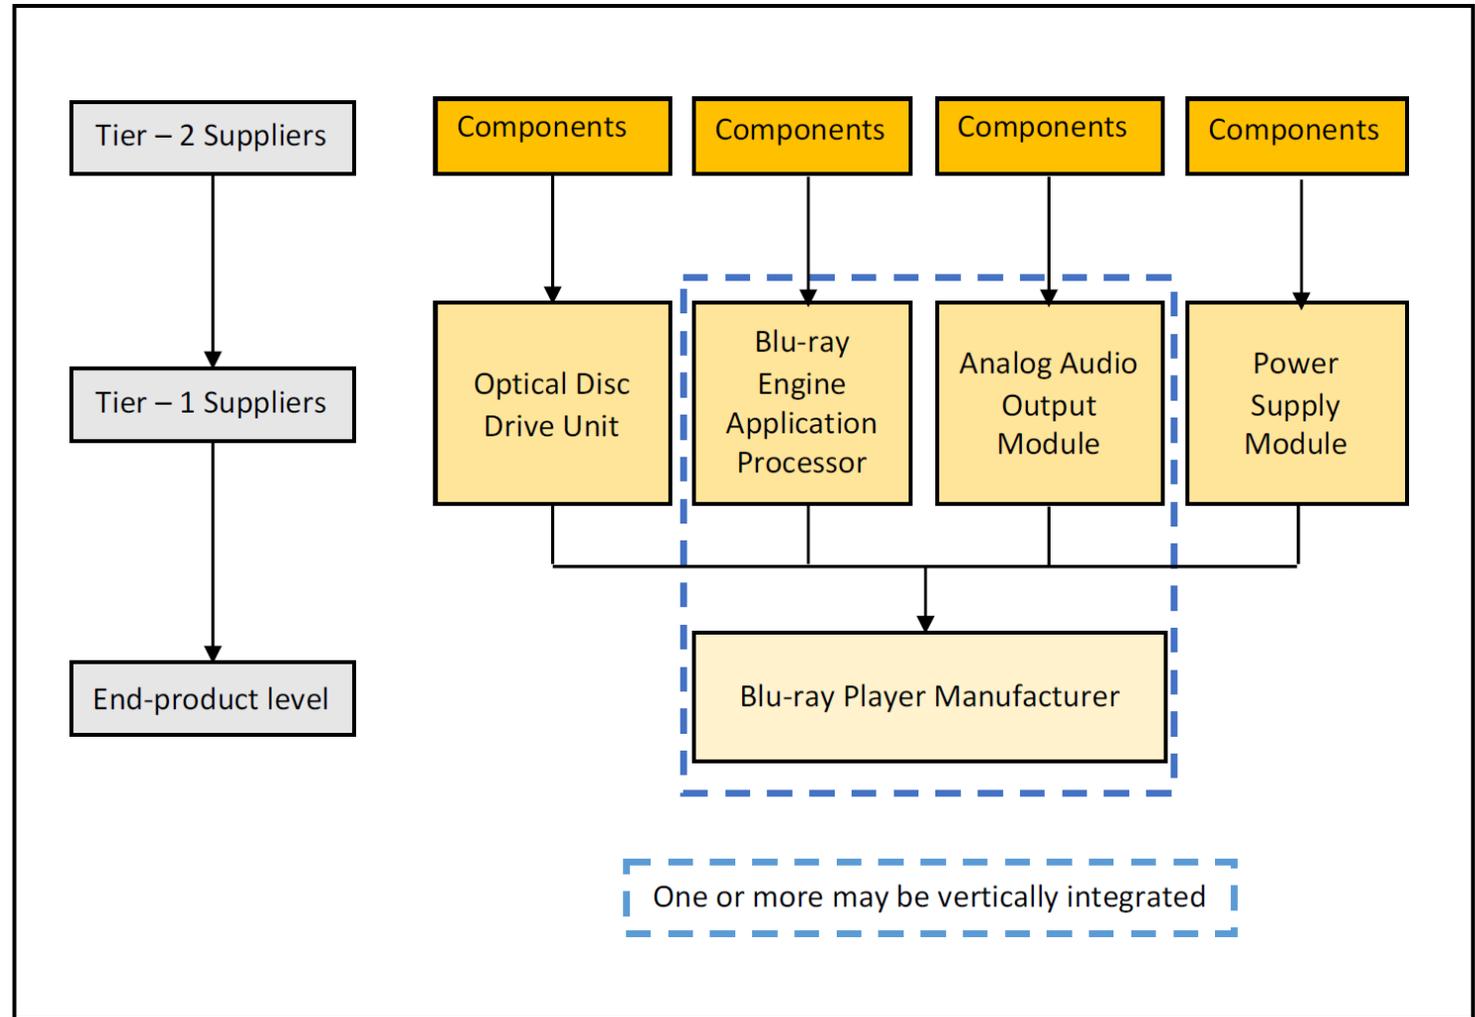

- 2006: Introduction of Blu-ray products to the market.
- 2011: Start One-Blue patent pool licensing more than 10.000 patents from 15 (now 19) licensors.
- One-Blue is a licensing platform for different Blu-ray products, incl. players, recorders, drives, software and pre-recorded/recordable discs.
- One-Blue is the first product pool combining SEPs for the different optical CD, DVD, Blu-ray standards in a single license and royalty.

# Case Study: One-Blue Patent Pool

Blu-ray Standards	DVD Standards	CD Standards
BD-ROM	DVD-ROM	CD-Audio
BD-Recordable	DVD+R	Video-CD
BD-Rewritable	DVD+RW	CD-R
	DVD-R	CD-RW
	DVD-RW	
	DVD-RAM	
	DVD-Audio	

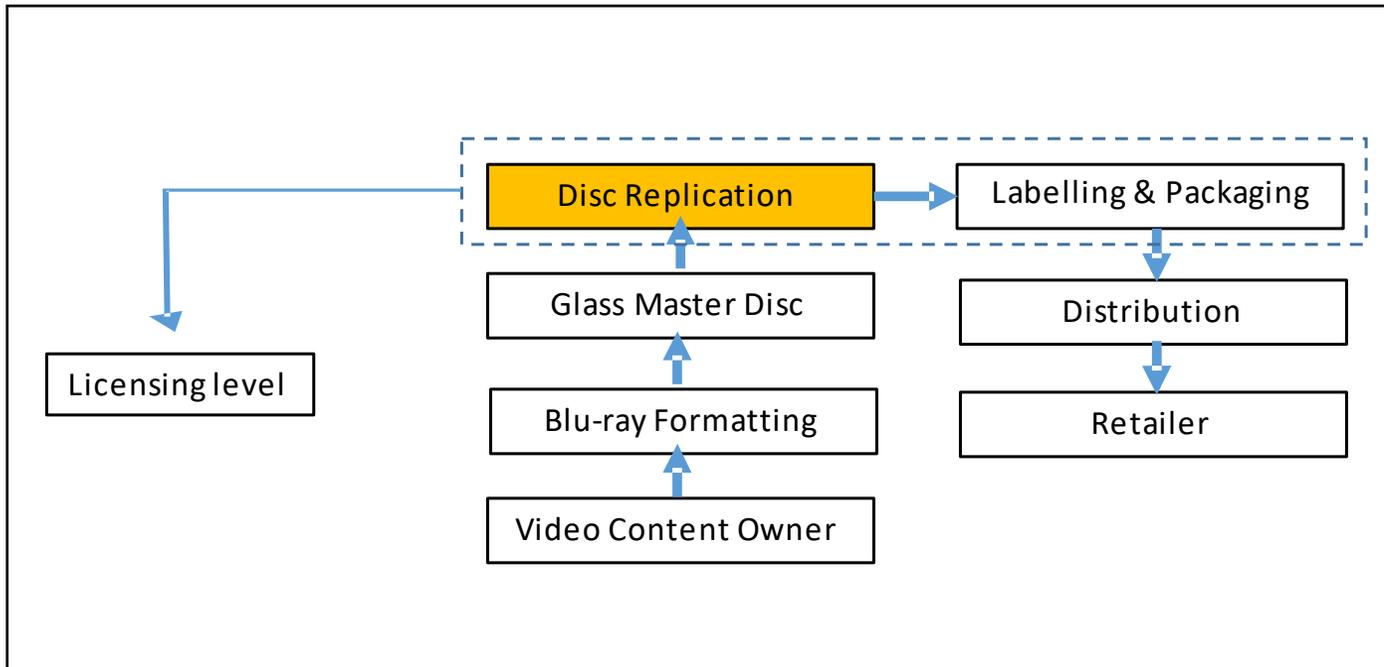

- Many different optical standards used in Blu-ray Players/Recorders.
- For each standard multiple SEP holders.
- Licensing per standard would seriously hamper development of market for Blu-ray product.

# Case Study: One-Blue Patent Pool

Value chain Blu-ray player manufacturing

# Case Study: One-Blue Patent Pool

Value chain Blu-ray pre-recorded disc manufacturing

# Thank you

## Q & A

### Forthcoming webinars

<b>11 February 2021, 16.00-17.00 CET</b>	3D printing and intellectual property issues and solutions	Dr. Peter Schramm, Attorney at Law on behalf of INTA  Alessandro Burro, 4iP Council Research Award winner 2019
<b>2 March 2021, 16.00-17.00 CET</b>	Downsides of Using Inadequate Open Source Software Processes and Licenses within Standard Development	Michele Herman, CEO of Early Stage Health-Tech Startup and Founder of JusTech Law  Dr. Justus Baron, Senior Research Associate at the Center on Law, Business, and Economics, Northwestern University Pritzker School of Law
